

# DROBNY ERNEST

## CONTACT INFORMATION

E-mail: [ernest.drobny@gmail.com](mailto:ernest.drobny@gmail.com)  
Phone number: (+48) 451-669-528

## SKILLS AND PROFICIENCIES

### Core technologies:

- Semantic HTML
- CSS (BEM, frameworks, preprocessors)
- JavaScript (ES6+)
- TypeScript
- React (with various libraries)
- Working with REST APIs
- SQL databases (PostgreSQL)
- NoSQL databases (MongoDB)
- Version control (GIT, GitHub Actions)

### Familiarities:

- Next.js - currently learning
- Cloud services (GCP, AWS)
- Docker
- Design (Figma, Canva)
- CMS integrations
- OOP (Java, C#)
- Software architecture (UML)
- Design principles and patterns

### Other:

- Atlassian (Jira, Confluence)
- Agile management (Scrum)
- Efficient soft skills (teamwork, public speaking)

## LANGUAGES

- Polish (native)
- English (C1 - both written and spoken)

## EDUCATION

Degree: Master's Degree in Information Management

Major: Architecture of IT Systems

Place: PJATK Warsaw

Graduation: (finishing 07/2025)

Degree: Bachelor of Engineering in Computer Science

Major: Software Engineering

Place: Warsaw School of Information Technology

Graduation: 05/2023

## EXPERIENCE

### Front-end Developer (React, Next.js, Typescript, CSS)

Freelance contractor | 08/2023 - 03/2024

Responsibilities I took were varied and encompassed a wide range of tasks aimed at optimizing project outcomes.

My key contributions lay in front-end development, where I focused on creating intuitive and visually engaging interfaces. By understanding user needs and project objectives, I crafted dynamic layouts that not only met but exceeded expectations. This involved meticulous attention to detail in design and functionality, ensuring a seamless and enjoyable user experience.

In addition to my technical contributions, I actively participated in project planning and decision-making processes.

### Full-stack Developer (React, Javascript, SQL, CSS)

HearMe & Emplomind UK | 12/2021 - 07/2023

CTO hired me to re-brand company's core application.

After successfully re-branding the application I was transferred to developing new services, modules and conducting integrations with existing solutions.

My role consisted in significant predominance of front-end tasks.

I was regularly solving business problems on my own, that required creativity and knowledge, to always try to choose the right tools and implementation method.

Using efficient time management skills I was able to spread worktime between front-end activities, writing migration scripts in PostgreSQL and executing tests in system use area.

Yet my obligation was to create technical documentation and video announcements regarding changes in our core product for clients.

I also took care of monitoring changes and resolving conflicts in various projects using GIT.

Apart from that, I assisted in developing both project management and business pipelines consistent with Scrum methodology, but also managed to regularly conclude technical training for other company departments.

### Front-end Developer (React, Javascript, CSS)

Apprenticeship | 04/2021 - 11/2021

Among many other activities, my role was based on building responsive front-end interface delivered by our UI/UX designer, helping with team management, technological stack optimization, JIRA issue tracking and administrating project's repository on GitHub.

### Information Technology Intern

Crowne Plaza Warsaw - The HUB | 07/2021 - 09/2021

I focused on ensuring the optimal performance and functionality of our IT infrastructure. This involved various responsibilities, such as verifying system and network performance to proactively adjust according to our established IT policies.
